

Faketeer's Collection

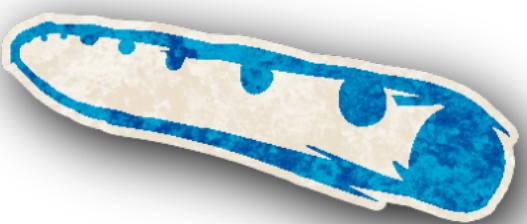

1st Edition:
Enter the Spiral
Almanac

Greetings! Welcome to Faketier's Collection by (im disappointed you had to ask). This is the 1st edition of said collection featuring 3 scripts and 45 characters (mostly Demons but i presume thats why youre here) that set out to change the game in their own ways. But first lets give credit to the awesome folks who helped make this a reality.

- The folks at TCC who playtested the scripts for me
- The folks at APoC and Unofficial who gave feedback on individual characters and scripts
- Eddy for helping with Cultist's icon
- Nunny for inspiring me to do this
- TPI for making this awesome board game that let me make this possible
- (as corny as this is) You, dear reader, who are most likely using these characters in whatever scripts you're making
- also me who kinda made the characters and the icons now lets get to the good part

also just a small request from me to please dont use any art used in this collection for other projects outside of FTC, please ask (discord is faketier)

Townsfolk

Pages 4-19

"Sir Armun has ordered for such exquisite outfits to the circus. Such eccentric ones too. Is he the main event, a spectator or someone who wishes to disrupt the show?"

Ability: You start knowing 3 characters of different types, only 1 of which is in-play.

Tailor has insight in what is in the bag.

The **Tailor** starts knowing 1 character from any 3 character types in any order, only 1 of these characters are in-play.

Only 1 character per character type.

It can be from any combination of **Townsfolk**, **Outsiders**, **Minions**, or **Demons**, in any order.

How To Run

When preparing the 1st night, mark any player with the **Knows** token.

On the 1st night, wake the **Tailor** and show them the character token of the player marked **Knows** and any 2 character tokens from 2 different character types, in any order. Put the **Tailor** to sleep.

Examples

The **Tailor** starts knowing that 1 of the **Witch**, **Mutant** and **Zhobazhbu** are in-play. The **Zhobazhbu** is in-play and removed the 1 **Outsider** that was meant to be in-play with their **Minion** being the **Harpy**.

The **Spy** registered as the **Washerwoman** and the **Tailor** learns that 1 of the **Washerwoman**, **Saint** or **Baron** are in-play.

"Gain 3 Focus status"

Focus

Ability: You start knowing the answer to a question. Each day, privately guess what it is: you learn how accurate you are.

Focus has to reverse engineer.

The **Focus** starts knowing an answer to a question they don't know, and each day may privately guess what that question is.

The **Focus** learns how accurate their guess was from a 5 point scale of freezing to boiling with bingo being the question.

The question can be about anything and the guesses can be questions about aspects to the question.

If **Focus** was **drunk** or **poisoned** when learning the answer, the question must still be an answer to the question, even if it is wrong.

How To Run

When preparing the 1st night, write down any question on a piece of paper and its answer on the back of it. On the 1st night, wake the **Focus**, show them the answer part then put them to sleep.

Each day, the **Focus** makes a guess about the question in private. Answer "Freezing", "Cold", "Warm", "Hot", "Boiling", or "Bingo". If Bingo, you may show them the full question card.

Examples

The **Focus** learns 2, 1, 0. They guess that the question is "What would each **Outsider** learn if they had the **Empath** ability?" The question was "What would each **Outsider** learn if they had the **Empath** ability, starting from closest clockwise to furthest?" and they learn so from their guess being accurate enough.

Focus starts out **drunk** or **poisoned** and learns "...you learn this. [-? to +? **Heretics**]". They are naturally scared. When they are **sober** and **healthy**, they guess "What is the second half of the **Obscrul's** ability?". They learn this is the exact question. The real answer, however, was "None, it is not-in-play."

}
```

Cynic

Ability: Each night, choose a player: learn an evil character they are, or could be.

Cynic doubts everyone.

Each night, the **Cynic** chooses a player and learns the evil character they are.

If they are not an evil character, the **Cynic** instead learns any evil character.

How To Run

Every night, wake the **Cynic**, they point at a player. If they are a **Minion** or **Demon**, show their character token. Otherwise show them any **Minion** or **Demon** character token. Put them to sleep.

Examples

The **Cynic** chooses the **Imp** and learns they are the **Imp**. They then choose the **Slayer** and learns they are the **Widow**.

The **Cynic** chooses the **Harlot** and learns they are the **Witch**.

Json

```
{  
  "id": "cynic_faketierscollection",  
  "image": [  
  
    "https://github.com/Tier6194/FakeTiersCollect

}
```

"Attack twice. After the attack, if the card was placed in an odd-numbered position on the field, increase the Attack Power of this card by 1 & refuce cooldown by 4"

Jump Strike

Ability: Each night, learn the character type of the previously learnt player's clockwise neighbor (skipping Travellers).

Jump Strike gets workable info.

The **Jump Strike** starts knowing a character type that belongs to a player, and after that, learns the character type of their next clockwise neighbor.

The **Jump Strike** does not know who the players they check are, only their character types.

The **Jump Strike**'s ability skips **Travellers**.

If the **Jump Strike** is **drunk** or **poisoned**, the marker that denotes who they learn next must still move.

How To Run

When preparing the 1st night, mark any non-**Traveller** player with the **Learnt** token.

On the 1st night, wake **Jump Strike**, use the corresponding reminder tokens to indicate the player marked with **Learnt**'s character type then put them to sleep.

Every night after the 1st, move the **Learnt** token 1 step clockwise, skipping any **Travellers**. Wake **Jump Strike**, use the corresponding reminder tokens to indicate that player's character type then put them to sleep.

Examples

The **Jump Strike** learns **Demon**. The **Demon**'s clockwise neighbors are the **Tyrant**, **Savant**, **Voudon**, **Stress**. The next 3 nights, they learn **Minion**, **Townsfolk**, **Outsider**.

The **Jump Strike**'s line is **Townsfolk**, **Townsfolk**, **Outsider**, **Minion**. They are **drunk** or **poisoned** on the 2nd night only but on the 3rd night, they learn **Outsider**.

Json

  "firstNight": 47,  
  "otherNight": 75  
}
```

"Gotcha."

Interceptor

Ability: Each night, choose a good character (not yours): learn that it is between 2 players. If not-in-play, learn false info.

Interceptor gets info on who's what.

Each night, the **Interceptor** chooses a character and learns they are 1 of 2 players.

The **Interceptor** can only choose **Townsfolk** or **Outsiders** and cannot choose their own.

If the character they chose is not-in-play, they learn false info.

How To Run

Every night, wake the **Interceptor**, they point at a **Townsfolk** or **Outsider** character icon on their character sheet. If it is in-play, point to 2 players, 1 of them is that character. Otherwise, point to any 2 players. Put them to sleep.

Examples

A is the **General**. The **Interceptor** chooses the **General** and learns A and B.

The **Interceptor** chooses a not-in-play character and learns C and D.

Json

```
{
  "id": "interceptor_faketierscollection",
  "image": [

  "ability": "Each night, choose a good character (not yours): learn that it is between 2 players. If not-in-play, learn false info.",
  "flavor": "Gotcha.",
  "firstNight": 57,
  "otherNight": 75
}
```

"Guards, seize this one!"

Count

Ability: Each night*, a good player who voted against you today dies.

The Count strikes down anyone who stands up to them.

A good player who voted against the **Count** dies tonight.

The **Storyteller** chooses who dies.

Only 1 player can die each night from this and must die if there is a possible target.

If a player was good when they voted but evil when they should die, they do not. If it was the other way around they do.

How To Run

If a good player voted against the **Count**, rotate their token to the side (in a script with multiple reasons to rotate, make your own system). If you cannot on your medium, use custom reminder tokens.

Every night but the first, you choose any player rotated to the side or marked as having voted for the count. That player **dies**, mark them with the **Dead** token and reorient all character tokens to normal.

Examples

3 good players voted against the **Count**. Tonight, 1 of them dies. The day nobody does and nobody is killed this way that night.

No good players voted for the **Count**. Nothing happens.

Json

```
{  
  "id": "count_faketierscollection",  
  "image": [  
  
    "https://github.com/Tier6194/FakeTiersCollection/blob/main/Townsfolk/

  ],  
  "otherNightReminder": "A good player who  
  voted against the Count dies. :reminder:",  
  "reminders": [  
    "Dead"  
  ],  
  "name": "Count - π",  
  "team": "townsfolk",  
  "ability": "Each night*, a good player  
  who voted against you today dies.",  
  "flavor": "Guards, seize this one!",  
  "otherNight": 54  
}
```

"Gain 12 Barrier"

Fortify

Ability: Each night*, choose a player (not yourself) : they can't die tonight. If you chose an evil player, you are drunk.

Fortify is the ultimate shield.

Each night but the first, the **Fortify** chooses a player who now cannot die that night. However if they choose an evil player, they are permanently **drunk**.

Becoming **drunk** is automatic and as such the evil player that made the **Fortify** **drunk** can die unless protected by other means.

The **Fortify** cannot protect themselves

How To Run

Every night but the first, wake the **Fortify**. They point at a player, they cannot die tonight, mark them with the **Safe** token. Put the **Fortify** to sleep. If they chose an evil player, they are **drunk**, mark them with the **Drunk** token.

Examples

The **Fortify** chooses A. **Corr. Sylphy** chooses A. They live.

The **Fortify** chooses the evil **False Idol**. The next night, they choose another player chosen by the **Demon**. That player dies.

Jinxes

Leviathan: If the **Leviathan** is in-play, the **Fortify**-protected player is safe from all evil abilities.

Riot: If **Riot** is in-play, the **Fortify**-protected player is safe from all evil abilities.

Fall. Charlotte: If **Fall. Charlotte** is in-play, the **Fortify**-protected player is safe from all evil abilities.

Json

```
{
  "id": "fortify_faketierscollection",
  "image": [
    "https://github.com/Tier6194/FakeTiersCollection/blob/main/Townsfolk/fortify_faketierscollection.png?raw=true",

      "reason": "If Riot is in-play, the Fortify-protected player is safe from all evil abilities."
    }
  ]
}
```

"The Lord is with me always. In hardship, in times of distress, times of celebration and times of success."

Templar

Ability: Each night*, choose 2 alive players (not yourself): if the Demon kills the 1st, the 2nd, if not the Demon, dies instead.

Templar redirects the Demon's kills.

Each night but the first, the **Templar** chooses 2 players. If the **Demon** kills the 1st, the 2nd dies instead.

This only works on the **Demon's** ability and not any other.

The **Templar** cannot kill the **Demon** nor choose themselves for either part of their ability.

This lasts until the **Templar's** next choice.

How To Run

Every night but the first, wake the **Templar**. They point at a player, mark them with the **Holy** token, then another player, mark them with the **Smote** token. Put them to sleep.

If the Demon kills the player marked **Holy** and the **Smote** player is not the **Demon**, the **Smote** player dies instead, mark them with the **Dead** token.

Examples

The **Templar** chooses A then B. The **Demon** chooses A and B dies instead.

The **Templar** chooses the **Demon** for their second target. When the **Demon** kills the 1st player, nothing changes.

The **Assassin** kills the **Templar's** first target. Nothing changes.

Jinxes

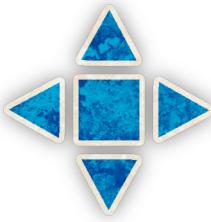

Leviathan: If the **Leviathan** is in-play, the **Templar**-protected player is safe from all evil abilities.

Riot: If **Riot** is in-play, the **Templar**-protected player is safe from all evil abilities.

Fall. Charlotte: If **Fall. Charlotte** is in-play, the **Templar**-protected player is safe from all evil abilities.

Json

```

```

"At the start of battle: Transform into a random Attack card. Turn back after battle"

Mystery Attack

Ability: Each day, you may visit the Storyteller to learn what your ability is tonight & tomorrow.

Mystery Attack scales on their teams performance.

Each day, the **Mystery Attack** will visit the **Storyteller** to learn the ability they will have tonight and tomorrow.

This ability can be anything.

This ability is intended to scale proportional to their team's performance, being more detrimental when they are performing well and more helpful when they are not.

If the **Mystery Attack** was **drunk** or **poisoned** when their ability should change, it does not and when they are **sober** and **healthy**, it is whatever their old ability was (if it exists).

The **Mystery Attack's** ability changes every dusk regardless of whether they ask.

How To Run

Once per day, the **Mystery Attack** will request a private chat with you. Take them away from the circle to not be overheard then whisper them the ability they will have tonight and tomorrow.

Every dusk, the **Mystery Attack's** ability changes to whatever you have decided it to be even if they did not ask for what their ability is.

Examples

The **Mystery Attack** visits the **Storyteller** and learns their ability will be "Each night, choose a player: learn a signal that hints to their character.". Tonight, they choose the **Chef** and learn "2",

The **Mystery Attack** does not visit the **Storyteller** to use their ability. They still wake and are prompted to choose a player as their ability still changed even if they do not know what it would change to.

The **Mystery Attack** visits the **Storyteller** and learns that their ability will become "A player thinks they are mad from the **Cerenovus** but they are not.". Tonight, a player learns the **Cerenovus** has chosen them and **Savant**.

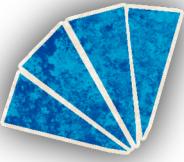

Jinxes

Vortox: The **Mystery Attack** when learning their next ability will always receive true information.

Zhabazhu: The **Mystery Attack** when learning their next ability will always receive true information.

}
```

"No enemy cards on the field next Phase.
Change HP to the number of cards on cooldown x 2"

Overdrive

Ability: Once per game, at night, choose a non-Traveller player: you learn their character. Chosen Townsfolk are drunk, even if you die.

Overdrive risks burning out their team.

Once per game, at night, the **Overdrive** may choose a player to learn their character.

They may not choose **Travellers**.

If the **Overdrive** chose a **Townsfolk**, that player is **drunk**.

The **Overdrive's drunkeness** will persist even after **Overdrive** dies.

If the **Overdrive** was **drunk or poisoned** when they chose a **Townsfolk**, that **Townsfolk** is never made **drunk** even when **Overdrive** is **sober** and **healthy**.

If the **Overdrive** becomes **drunk or poisoned** after making a **Townsfolk** drunk, that **Townsfolk** is **sober** until **Overdrive** is.

How To Run

Every night, wake the **Overdrive**. They either shake their head "no" or point to a player. If they pointed to a player, show that player's character to the **Overdrive** then put them to sleep. If that player was a **Townsfolk**, they are **drunk**, mark them with the **Drunk** token. After this, the **Overdrive** has no ability, mark them with the **No Ability** token.

Examples

The **Overdrive** chooses the **Sage** and learns this. When the **Demon** kills them, they learn 2 players who are not the **Demon**

The **Overdrive** chooses the **Cerenovus** and learns this.

The **Overdrive** chooses the **Dreamer** and makes them **drunk**. Later, when the **Overdrive** is **drunk or poisoned**, the **Dreamer** learns true information until **Overdrive** is **sober** and **healthy**.

The **Overdrive** is **drunk or poisoned** and chooses the **Savant**. The **Savant** is never **drunk** even after **Overdrive** becomes **sober** and **healthy**.

Json

```

"Recover HP by 8 and gain 4 Barrier"

Hope

Ability: Once per game, during the day, privately ask the Storyteller any question & learn some answers (only 1 is correct).

Hope asks a question.

Once per game, during the day, the **Hope** may visit the **Storyteller** to ask any question and learn a list of answers with only 1 true.

The question can be about anything.

There can be any number of answers, generally dependent on when the question was asked and the strength of said question.

This is a private question and cannot be overheard by any other player.

How To Run

During any day, the **Hope** can request a private chat with you. Take them away from the circle so you cannot be overheard. They will ask you a question. Tell them any number of answers with only 1 being the true answer. They have no ability, mark them with the **No Ability** token.

Examples

The **Hope** asks "If the **Overdrive** exists, who is it?". The **Storyteller** gives them 4 players, one of them is the **Overdrive**.

The **Hope** asks "What is the evil team?". The **Storyteller** shows them 5 possible evil teams with different combinations of players and characters. Only 1 is true.

```

"I must go, I must ascend. To the Realm Beyond."

Spirit

Ability: If the Demon kills you, from now on you know the in-play evil characters.

The Spirit must ascend.

If the **Demon** kills the **Spirit**, they know all the in-play **Demons** & **Minions**.

When the evil characters in-play change, the **Spirit** is informed of the new in-play characters as soon as possible when night falls.

If the **Spirit** was **drunk** or **poisoned** when the **Demon** kills them, they cannot learn any info when they are **sober** and **healthy**.

How To Run

If the **Spirit** was killed by the **Demon**, wake the **Spirit**, show them the character tokens of all in-play **Minions** and **Demons**. Put them to sleep. Mark them with the **Ascended** token as a reminder that they learn info.

If at any point in the game, the in-play characters change, wake the **Spirit** as soon as night begins. Show them the character tokens of all the in-play **Minions** and **Demons**. Put them to sleep.

Examples

The **Spirit** is killed by the **Demon**. Tonight, they wake to learn all the in-play evil characters. When the **Pit Hag** changes the **Demon's** character, the **Spirit** is woken to learn the new evil characters in-play.

The **Spirit** is killed by the **Corrupted**. They learn nothing and never wake.

Jinxes

Leviathan: Each night*, the **Leviathan** chooses an alive good player (different to previous nights): a chosen **Spirit** uses their ability but does not die.

Riot: Each night*, **Riot** chooses an alive good player (different to previous nights): a chosen **Spirit** uses their ability but does not die.

Fall. Charlotte: Each night*, **Fall. Charlotte** chooses an alive good player (different to previous nights): a chosen **Spirit** uses their ability but does not die.

Tyrant: If the **Tyrant** kills the **Spirit**, from now on the **Spirit** knows the in-play evil characters.

"Attack & if there's another card user's card on the field, transform it to Shadow Pierce"

Shadow Pierce

Ability: If both of you guess each other, good wins. Minions know that if they publicly guess you (once), evil wins. [+1 Shadow Pierce]

Twins!

At any point in the game, **Shadow Pierces** can guess who the other is. Their guess only counts once per day/night cycle.

Shadow Pierces can be woken up at night to guess.

If both **Shadow Pierces** have successfully guessed each other, good wins, even if the successful guesses were at different times.

Neither **Shadow Pierce** learn whether their guess was correct or incorrect.

All Minions will learn that **Shadow Pierce** is in-play and, once per game, may publicly claim to be evil and guess that any 1 player is a **Shadow Pierce**. If they are correct, evil wins.

If they are incorrect, future guesses will silently fail. This is a constant check and at least 1 **Shadow Pierce** has to be alive.

How To Run

When setting up the game, remove 1 **Townsfolk** token and replace it with the 2nd **Shadow Pierce** token.

On the 1st night, wake each **Minion** individually and show them **Shadow Pierce**'s token then put them to sleep.

At any time during the game, a **Shadow Pierce** may publicly or privately make a guess. If correct, mark them with a **Correct** token. If both **Shadow Pierces** are marked with **Correct** tokens, declare that the game is over and good has won.

At any time during the game, if a **Minion** publicly guesses who is a **Shadow Pierce**, mark them with the **Guess Used** reminder. Future guesses do nothing. If they were correct, declare that the game is over and evil has won.

Examples

At night, a **Shadow Pierce** guessed correctly. Later in the game, the 2nd also guessed correctly, good wins.

A **Minion** correctly guesses a **Shadow Pierce**. Evil wins.

A **Shadow Pierce** is dead but good still wins after they guess each other.

Jinxes

Bounty Hunter: A **Shadow Pierce** cannot turn evil.

Marionette: The **Marionette** does not learn that the **Shadow Pierces** are in-play.

Mezepheles: A **Shadow Pierce** cannot turn evil.

Pit Hag: If a **Pit Hag** attempts to create a **Shadow Pierce** & there are spare tokens, the **Storyteller** chooses good players equal to spare tokens to become **Shadow Pierces**.

Spy: The **Spy** may choose to not see the **Grimoire**. If they do see the **Grimoire**, evil does not win from correctly guessing a **Shadow Pierce**.

Widow: On the **Widow**'s first night, they may choose to not see the **Grimoire**. Instead all in-play character tokens are shown to them. They choose 1 of those to poison. If they chose to see the **Grimoire**, evil does not win from correctly guessing a **Shadow Pierce**. The **Widow** cannot choose a **Shadow Pierce** to poison.

Time: geniunely just dont. i dont even have an idea for a jinx

"Attack then reduce cooldown of
Magic cards"

Inverse Strike

Ability: The 1st time an evil player chooses you with their ability at night, an evil player is chosen instead.

Inverse Strike does a reversal.

The 1st time an evil player chooses the **Inverse Strike** with their ability during the night, an evil player is instead affected.

This can be any ability so long as it chose the player who is the **Inverse Strike** or the character itself.

After the 1st time, **Inverse Strike** is no longer safe.

How To Run

The 1st time, at any point in the night, if an evil player chose the **Inverse Strike**, have their ability affect an evil player of your choosing. The **Inverse Strike** has no ability, mark them with the **No Ability** token.

Examples

The **Poisoner** chooses the **Inverse Strike**. Instead the **Demon** is **poisoned** and when they choose a player to kill, they live. The **Godfather** chooses then the **Inverse Strike** and they die.

The **Ojo** chooses **Inverse Strike**. They live and a **Minion** dies.

```

Attack twice by damage of 3 + number of remaining Arcana. Reduce Arcana to 0

Ammo Blast

Ability: Only players of your alignment can die, even if for some reason they cannot. Each night, you may choose to be drunk until dusk.

Ammo Blast explodes its team.

Only players who are the **Ammo Blast's** alignment can die. Normally these are just good players so we will just say good players but if they are evil, the exact opposite of what will be described is true.

If a good player cannot die for any reason but should die, they will, so long as the **Ammo Blast** remains sober and healthy.

The **Ammo Blast** may choose to be drunk for 1 night and day.

Evil players cannot die no matter what.

The **Assassin** and the **Sapholate** ignore this and can kill evil players with their abilities.

How To Run

Every night, wake the **Ammo Blast**. They nod "Yes" or shake their head "No". Put them to sleep. If they nodded, mark them with the **Drunk** token. Every dusk, remove the **Drunk** token from them if there is any.

If the **Ammo Blast** is sober and an evil player should die, they do not. If a good player should be protected from death, they are not. Reverse this if the **Ammo Blast** is evil.

Examples

The good **Ammo Blast** is sober. The **Innkeeper** protects a good player attacked by the **Imp**. An evil player is also killed by the **Templar**. The good player dies but the evil player lives.

The **Sailor** and **Ammo Blast** are sober. The **Pacifist** also lives but when the **Sailor** is executed, they die. The next night, the **Ammo Blast** becomes drunk and **Philosopher** chose the **Sailor** and remained sober. They survive execution tomorrow.

The **Ammo Blast** is sober. The **Sapholate** kills an evil player. The evil player dies. The next night, they are drunk and the **Assassin** kills themselves. Both kills succeed because neither **Demon** nor **Minion** give a flying fuck for who is protecting whom.

Outsiders

Pages 22-29

"Inflict 3 Sensitive"

Whisper

Ability: You start knowing up to 2 players: what happens to them might happen to you & vice versa, even if dead, drunk or poisoned.

Whisper spreads its pain.

Whisper starts knowing up to 2 players they are linked to. Anything that happens to **Whisper** might happen to those players and vice versa.

This can be death, **drunkeness**, **poison**, safeness, inability to die, resurrection, the effects of being chosen or choosing a particular player, changing alignments, changing characters.

Whisper keeps their ability even if they are **dead**, **drunk** or **poisoned**.

Whisper's effect linking ability can only happen a short window after the effect happens to either of the linked players. Any point afterwards and it can no longer link.

Whatever happens to either of the linked players, in order to spread to the other, must happen to **Whisper** first.

How To Run

When setting up the 1st night, mark up to 2 players with **Linked** tokens. On the 1st night, wake **Whisper**, point to all players marked **Linked** and put them to sleep.

At any point in the game, if something were to happen to **Whisper** or a player marked **Linked**, you may choose to make it happen to any of the 3 players.

Examples

The **Whisper** starts knowing A and B. A is **poisoned** then the **Whisper** is and then B is also **poisoned**. When A becomes **healthy** so do all of them.

The **Whisper** starts knowing A. When A dies, the **Whisper** dies.

A player linked to the **Whisper** dies. The **Whisper** does not so the other player linked can't die to the **Whisper's** ability.

"Does nothing. Disappears when used or after battle"

Stress

Ability: Each night, if you died, a Minion's ability might work twice until dusk. You & they learn this.

Stress boosts Minions.

At the start of every night, if **Stress** died, a **Minion's** ability might work twice until dusk.

Stress learns this every time this happens.

The check for **Stress'** ability only happens at the start of every night so if **Stress** is alive in the middle of the night, their boost doesn't lose effect.

The same also applies for when **Stress** dies during the night.

If an already dead player becomes **Stress**, their ability never triggers until they are alive then die while having **Stress'** ability.

How To Run

Every dusk, remove the **Works Twice** token, if any, from the **Grimoire**. Then, if **Stress** is dead, you may mark a **Minion** with that token. Wake them, show them the "This character selected you" info token and **Stress'** token then put them to sleep. Wake **Stress** and give them a thumbs-up then put them to sleep.

The **Minion** marked with **Works Twice**'s ability works twice now. After they use their ability they may use it again.

Examples

Stress is dead. Tonight the **Cerenovus** makes 2 players **mad**. The next night the **Pit Hag** changes the characters of 2 players. After that no **Minion** acts twice. **Stress** learns all of this on the nights they happen.

Stress is **drunk** or **poisoned** and dies. When they are **sober** and **healthy**, the next night a **Minion** acts twice and **Stress** learns this.

Jinxes

Marionette: The **Marionette** does not learn they are affected by **Stress'** ability.

Mezepheles: A **Stress** boosted **Mezepheles** cannot create 2 evil players.

Summoner: If the **Summoner's** ability works twice due to **Stress**, the second **Demon** they create retains their alignment. If the **Summoner** creates 2 evil **Demons**, deaths tonight are arbitrary.

```

"Gain 3 Feint Status"

Feint

Ability: Each night, learn a player: you are mad they are evil tomorrow or 1 of you might be executed. Once, you learn they are a Minion.

Feint pushes everyone.

Each night, **Feint** learns a player they must be mad is **evil** tomorrow or either of them might die.

If **Feint** ever learns a **Minion**, they might learn they did so. This can only happen once per game.

Feint's kill ability can happen at any time between the start of the next day and right before they learn a new player.

How To Run

Every night, wake **Feint**, point to a player and mark them with the **Mad** token. If this player is a **Minion** and **Feint** is not marked with the **Minion** token, you may show them the **Minion** token and then mark **Feint** with it. Put **Feint** to sleep.

Tomorrow, if **Feint** was not **mad** their target was evil, you may choose to execute either 1 of them today.

Examples

Feint learns a player. They attempt to execute them for being evil tomorrow. Nothing happens.

Feint learns a player. They attempt to hint that they might be **mad**. That player is executed through **Feint**.

Feint learns a **Minion**. They learn that they did. The next night **Feint** learns another **Minion** and does not learn anything else.

Json

},
```

"Reduce opponent HP by 5. Reset cooldown of other cards on the field if opponent was defeated by this card"

Coda

Ability: When you die, the Demon gains a Minion ability & learns which.

Coda empowers the Demon.

When **Coda** dies, they give the **Demon** any 1 **Minion** ability.

This ability is permanent the moment **Coda** dies and cannot be removed by making **Coda drunk or poisoned**.

If **Coda** was **drunk or poisoned** when they die, no **Minion** ability is given, even when they become **sober** and **healthy**.

The **Demon** wakes when that **Minion** would wake, choose what that **Minion** would choose and does everything that **Minion** would do.

They are still the **Demon** and have their old abilities.

How To Run

When **Coda** dies, replace their character with a **Minion** token and mark them with the **Is Coda** token. At the earliest opportunity at night, wake the **Demon**, show them the "**This character selected you**" info token with **Coda's** token then that **Minion** token. The **Demon** now has that ability. Put them to sleep.

If you give the **Demon** an in-play **Minion** ability, mark that **Minion** with the **Demon's Ability** token instead.

Examples

Coda dies. The **Demon** gains the ability of the Godfather.

Coda dies while **drunk or poisoned**. The **Demon** gains no ability even after they become **sober** and **healthy**.

Coda dies. The **Demon** gains a **Minion** ability as normal. **Coda** is later made **drunk or poisoned**. The **Demon** keeps their ability.

Jinxes

Baron: If the **Demon** gains the **Baron's** ability, up to 2 players become not-in-play **Outsiders**.

Boondandy: If the **Coda** is executed and the **Demon** would gain the **Boondandy's** ability, it instead triggers immediately.

False Idol: If the **Coda** dies and would give the **False Idol's** ability, a **Minion** gains it instead and learns so.

Hunter: Up to 3 extra players learn that the **Hunter** is in-play. If the **Hunter's** ability is created midgame, those are its targets. If no possible targets, the **Hunter's** ability cannot be put into play.

Marionette: If the **Demon** has a neighbor who can be a **Marionette** and **Coda** would give the **Marionette's** ability, they become an evil **Marionette**. This fails if there is already an extra evil player.

Mastermind: If the **Coda** dies and would give the **Masterminds's** ability, a **Minion** gains it instead and learns so.

Scarlet Woman: If the **Coda** dies and would give the **Scarlet Woman's** ability, a **Minion** gains it alongside their own instead and learns so.

Summoner: The **Demon** cannot create an in-play **Demon**. If they create an out of play **Demon**, deaths tonight are arbitrary.

Vizier: If the **Coda** dies and would give the **Vizier's** ability, a living **Minion** gains it alongside their own.

}
```

"Take 4 damage. Disappears from deck when used in Battle. Cannot be lost or dissolved"

Trauma

Ability: When you die, learn your character then a Townsfolk becomes a Trauma, thinks they are a Townsfolk & learns false info.

Trauma spreads itself upon dying.

When a **Trauma** dies, a **Townsfolk** becomes a **Trauma** but thinks they are still a **Townsfolk**.

Traumas made by **Trauma's** ability must receive false info and must think they are a **Townsfolk**, whether its the **Townsfolk** they originally were or a new **Townsfolk**.

When a **Trauma** made by **Trauma's** ability dies, they learn they are **Trauma**.

The original **Trauma** knows they are **Trauma**.

Dead **Townsfolk** can be turned into **Traumas** to end the chain.

How To Run

When a **Trauma** dies, mark any **Townsfolk** with the **Is a Trauma** token. They are now a **Trauma**. At the earliest opportunity at night, wake the newly dead **Trauma**, show them the **"You are"** info token and **Trauma's** token. Replace their character with a spare **Trauma** token if it is not already **Trauma** and put them to sleep.

Traumas who think they are a **Townsfolk** must only learn false info from their ability.

Examples

Trauma dies. The **Mathematician** becomes **Trauma** and does not learn this. They receive 1s and 2s when nobody's ability malfunctions. They die and learn they are **Trauma**, turning another **Townsfolk** into **Trauma**

4 **Traumas** have been made. When the 4th one dies, a dead **Townsfolk** becomes **Trauma**.

Jinxes

Vortox: Players turned into **Trauma** through its ability learn only true info if the **Vortox** is alive, **sober** and **healthy**.

Sabnock: **Traumas** created by its own ability do not register as **Outsiders** to the **Sabnock**.

"Gain 2 Automana status & reduce cooldown of Attack cards by 2"

Showtime

Ability: If you die & 5 or more non-Travellers live, choose an alive player: if they are not executed tomorrow, your team loses.

Showtime is a theater kid.

When the **Showtime** dies and 5 or more players live, aka 6 players before they died, they must choose an alive player. If that player is not executed the next day, good loses.

The **Showtime's** ability excludes **Travellers**.

The **Showtime** must choose an alive player.

If **Showtime** dies during the day, their choice must immediately happen after their death or, if it was through execution, they may instead make it at night.

The choice may be private or public but must happen regardless.

The **Storyteller** may rule that instead of the lifecount restriction, the **Showtime's** team wins if their target is executed in the final 3 (this is boring and not very **Outsidery** imo).

Evil **Showtimes** make evil lose.

How To Run

If **Showtime** dies, they must privately or publicly point to or, during the day, name a player immediately. Mark that player with the **Target** token. The next day, if that player is executed, remove the token. Otherwise declare that **Showtime's** team loses

Examples

Showtime died that day with 5 other players alive. They immediately choose a player who does not get executed tomorrow, evil wins.

The **Demon** kills the **Showtime** leaving 5 players alive. The **Showtime** chooses a player. They are executed tomorrow and the game continues.

The **Showtime** dies with 3 **Travellers** and 4 players alive. They do not need to choose anyone nor does it do anything if they do.

Jinxes

Hagumoth: If the **Showtime** chooses the same player as the **Hagumoth**, the **Showtime** is **Poisoned**.

Minions

Pages 31-44

"if you're not willing to obey, then
only the end awaits you"

Hunter

Ability: You start knowing up to 3 in-play good characters (they learn this). If they are all dead, your team wins.

Hunter hunts.

The **Hunter** starts knowing up to 3 in-play good characters and if all of them are dead, evil wins.

These players learn the **Hunter** is in-play.

The **Hunter** targets the players not the characters themselves.

The game ends immediately after their deaths.

If the **Hunter** started out **drunk** or **poisoned** they still have targets, even if their characters might be different and those targets do not know this until **Hunter** is **sober** and **healthy**.

How To Run

When preparing the 1st night, mark up to 3 good players with **Target** tokens. On the 1st night, wake the **Hunter**, show them the character tokens of the players marked **Target**. Put them to sleep. Wake 1 of the players marked **Target**, show them **Hunter's** character token and put them to sleep. Repeat for the rest of the players.

If at any point in the game, all players marked **Target** are dead, announce the game is over and that evil has won.

Examples

The **Hunter** starts knowing the **Blitz**, **Cynic** and **Interceptor**. The **Demon** kills one of them, another is executed and then when the **Hunter** is **drunk** or **poisoned**, the final 1 dies. When the **Hunter** is **sober** and **healthy**, evil immediately wins.

The **Hunter** is **drunk** or **poisoned** and learns the wrong characters. When they are **sober** and **healthy**, at night, the real targets learn the **Hunter** is in-play.

Jinxes

Exorcist: The **Hunter** cannot have a **Exorcist** as their target.

Heretic: The Hunter cannot have a Heretic as their target.

King: The **Hunter** cannot have a **King** as their target.

Lunatic: The **Hunter** cannot have a **Lunatic** as their target.

Pit Hag: Up to 3 extra players learn that the **Hunter** is in-play. If the **Hunter's** ability is created midgame, those are its targets. If no possible targets, the **Hunter's** ability cannot be put into play.

Spy: The **Spy** may choose to not see the **Grimoire**. If they do see the **Grimoire**, evil does not win from the **Hunter's** ability.

Widow: On the **Widow's** first night, they may choose to not see the **Grimoire**. Instead all in-play character tokens are shown to them. They choose 1 of those to poison. If they chose to see the **Grimoire**, evil does not win from the **Hunter's** ability.

Coda: Up to 3 extra players learn that the **Hunter** is in-play. If the **Hunter's** ability is created midgame, those are its targets. If no possible targets, the **Hunter's** ability cannot be put into play.

"Chomp Chomp"

Biter

Ability: You start knowing which Outsiders are in-play. Dead Outsiders poison 1 Townsfolk neighbor. [-1 to +1 Outsider]

Biter feeds on Outsiders.

The **Biter** starts knowing all **Outsider** characters in-play. When any **Outsider** dies, they poison 1 **Townsfolk** neighbor.

If the **Biter** is in-play, 1 **Outsider** might have either been added or removed.

Dead **Outsiders** constantly poison 1 **Townsfolk** neighbor, if the **poisoned** changes character types, they are no longer **poisoned** and it moves to another player.

If the **Biter** was **drunk** or **poisoned** when the **Outsider** died, they still poison a **Townsfolk** neighbor when they are **sober** and **healthy**.

How To Run

When setting up the game, you may choose to either remove 1 **Townsfolk** token and add 1 **Outsider** token or remove 1 **Outsider** token and add 1 **Townsfolk** token.

On the 1st night, wake the **Biter**, show them the character tokens of all **Outsiders** in-play. Put them to sleep.

When an **Outsider** dies, 1 of their **Townsfolk** neighbors is **poisoned**, mark them with the **Poisoned** token.

Examples

The **Biter** starts knowing the **Showtime** and **Stress** are in-play. The **Showtime** dies and poisons a **Townsfolk** neighbor. The **Biter** is **drunk** or **poisoned** when the **Stress** dies but when they are **sober** and **healthy**, 1 of **Stress'** **Townsfolk** neighbors are **poisoned**.

The **Biter** is in-play. The **Outsider** count might be 1 less or 1 more than it should be.

Jinxes

Heretic: The **Heretic** starts knowing an out-of-play **Outsider** & registers as that **Outsider** to **Biter**.

"Through the path of Umalaq, I stand upon thy grave. Through the will of the One Beyond, I break thy spirit. Through the ends of Heaven and Hell, I cut thy heart."

Hagumoth

Ability: Each night, you may choose a player: they learn this & if they are executed tomorrow, their team loses.

Hagumoth tears you apart.

Each night, the **Hagumoth** chooses a player, if they are executed tomorrow, their team loses.

The chosen player learns the **Hagumoth** has chosen them.

The **Hagumoth** may choose to not act.

How To Run

Every night, wake the **Hagumoth**. They shake their head "no" or point at any player. If they pointed, mark that player with the **Chosen** token and put the **Hagumoth** to sleep. Wake that player, show them the "**This character selected you**" info token and **Hagumoth**'s token and put them to sleep.

Tomorrow, if the chosen player is executed, announce that the game is over and which team has won.

Examples

The **Hagumoth** chooses a good player. They learn this and are executed tomorrow so evil wins.

The **Hagumoth** chooses themselves. They are executed tomorrow and good wins.

Jinxes

Plague Doctor: If the **Plague Doctor** dies, a living Minion gains the **Hagumoth** ability in addition to their own and learns this.

Vizier: The **Vizier** wakes with the **Hagumoth**, learns who they choose and cannot choose to immediately execute that player tomorrow.

Showtime: If the **Showtime** chooses the same player as the **Hagumoth**, the **Showtime** is **poisoned**.

"We shall dance, challenger"

Tyrant

Ability: Each night*, choose a player: they die. The Demon wakes every other night, even if you are dead, drunk or poisoned.

The Tyrant overthrows the Demon.

Each night but the first, the **Tyrant** chooses a player, they die.

The **Demon** cannot wake every other night, even if the **Tyrant** is dead, **drunk**, or **poisoned**.

This applies to all alive **Demons** (if there are multiple).

How To Run

Every night but the first, wake the **Tyrant**, they point to any player. That player dies, mark them with the **Dead** token.

After the **Demon** wakes, mark them with the **Overthrown** token. If the **Demon** should wake and is marked with **Overthrown**, they don't and the **Overthrown** token is removed.

Examples

On the 2nd night, the **Demon** wakes to kill a player and so does the **Tyrant**. On the 3rd night, only the **Tyrant** does.

The **Tyrant** dies. The **Demon** still wakes every other night but the **Tyrant** stops waking.

Jinxes

Banshee: The **Tyrant** registers as the **Demon** to the **Banshee**.

Lil' Monsta: The **Lil' Monsta's** ability does not kill every other day/night cycle.

Monk: The **Tyrant** registers as the **Demon** to the **Monk**.

Sage: If the **Tyrant** kills the **Sage**, the **Sage** learns the **Demon** is 1 of 2 players.

Spirit: If the **Tyrant** kills the **Spirit**, from now on the **Spirit** knows the in-play evil characters.

Yaggababble: The **Yaggababble's** ability does not kill every other day/night cycle.

Zombuul: If the **Tyrant** is in-play, the **Zombuul** instead wakes every other night that no player died that day.

"Do not worry, your death will be swift and painless"

Corrupted

Ability: Twice per game, at night*, choose 2 players: all players silently vote for who lives & who dies, you break ties.

The Corrupted makes you pick your poison.

Twice per game, the **Corrupted** chooses 2 players that players must vote for who dies and who lives.

All players learn who was chosen.

Voting is silent, anonymous and vote tokens are not consumed.

Players can be brought back to life this way.

The Corrupted breaks ties.

Raising your hand is voting for the 1st and lowering it is a vote for the 2nd.

The countdown can last as long as the **Storyteller** needs, so long as they are audibly (or at least clearly) counting from 10.

How To Run

When setting up the 1st night, mark the **Corrupted** with 2 **Has Ability** tokens.

Every night but the 1st, if the **Corrupted** has their ability, wake the **Corrupted**. They shake their head "no" or point to any 2 players. If they pointed, remove a **Has Ability** token from the **Corrupted**, mark the 1st with the **Choice 1** token and the 2nd with the **Choice 2** token. Announce, "The **Corrupted** has chosen" the 1st player's name "and" the 2nd player's name. "I will count from 10 and whoever has their hand raised at the end will vote for the 1st to die and whoever has their hand down will vote for the 2nd to die.". After the countdown, whoever has the most votes dies, mark them with the **Dead** token and the other player lives, remove any existing **shroud**.

Tomorrow, announce who lived and who died, regardless of if anything changed of either player.

On a virtual **Grimoire**, such as the official app, this is impossible to do. Instead all players will silently message their vote and those who do not will have voted for the 2nd.

Examples

The **Zhobazhbu**-killed **Corrupted** chooses another player and themselves. After the countdown, most players have their hand. The 1st player dies and they are alive.

The **Corrupted** chooses 2 players. After the countdown, there is a tie and **Corrupted** has their hand down so the 2nd player dies.

Json

"Awaken, sister. It is time to serve once more."

Cultist

Ability: You are many. [+1 Cultist]

There is never just 1 Cultist.

There is a second **Cultist** added to the bag at the start of the game.

This replaces a **Townsfolk**.

The added **Cultist** cannot add another one.

Cultists created midgame do not add a second one.

How To Run

When setting up the game, remove 1 **Townsfolk** character token and replace it with the spare **Cultist** token.

Examples

The **Cultist** is in-play. There are 2 **Minions** despite there only being 8 players.

The **Pit-Hag** creates a **Cultist**. A second one is not made.

Json

```

"I am the Infinite Spiral, the herald of The One Beyond.
What are you?"

Marusok

Ability: You have a not-in-play Demon ability & register as them too. Evil players might not wake. [All Minions are Marusok]

Marusok summons all Demons.

Marusok has an out of play Demon ability and registers as that Demon too.

If **Marusok** is in-play, all **Minions** are **Marusok**.

The **Storyteller** may choose to not wake evil players.

Marusok also still registers as **Marusok**.

Marusok is not "**The Demon**" and do not need to die for good to win. The real **Demon** still exists.

Each **Marusok** must have a different **Demon** ability.

How To Run

When setting up the game, remove all **Minion** tokens and replace them all with **Marusok** tokens.

On the 1st night, wake a **Marusok**, show them a not-in-play **Demon** character token and replace their character token with that **Demon** then mark them with an **Is Marusok** token. They have that **Demon's** ability. Put them to sleep. Repeat until all **Marusok** have woken.

At night, you may choose to not wake an evil player for their ability if they do wake.

Examples

Marusok is in-play in a 10 player game. Both **Minions** are **Marusok** and have the abilities of the **Pukka** and **Zombuul**. The **Pukka-Marusok** does not wake night 1 but wakes night 2, on night 3 the real **Demon** wakes and on night 4, the **Zombuul-Marusok** is the only evil player to wake.

The **Demon** dies and good wins while **Marusok** lives.

Jinxes

Corr. Sylphy: **Corr. Sylphy's** ability only checks the last night they woke.

Lil' Monsta: If the **Engineer** successfully creates **Marusok**, all **Minions** become **Marusok**.

Invitation Letter: **Marusok** can be invited alongside a **Demon**. If it is, all **Minions** become **Marusok** except the **Invitee**, who becomes the invited **Demon**.

Kazali: The **Kazali** may choose **Marusok's** Demon abilities. If they made a **Marusok**, all **Minions** become **Marusok**.

Legion: If **Marusok** has the **Legion** ability, other **Marusok** might have it as well. The **Demon** might be **Legion** too.

Po: **Demons** may choose to not attack when they wake. If the **Po** wakes and the last **Demon** to wake chose to not attack, they choose 3 players.

Summoner: The **Summoner** may choose to create **Marusok** as well as their **Demon**. If they do, all **Minions** become **Marusok** and the **Summoner**-chosen player becomes the chosen **Demon**.

Json

"you shall not pass"

Grave

Ability: Once per game, you may ask a question that, if good wins, all players learn. If most good players are wrong, evil wins instead.

Grave awaits the fool.

Once per game, at any point in time, **Grave** may ask any question to the **Storyteller**. This question may be denied or accepted. If denied, you may prevent them from asking again or let them ask again.

The question can be asked at any time, through any communication medium and can concern anything.

Grave may, if you allow it, change their question at any time before the game ends.

If good wins, all players learn what the **Grave** has asked. A discussion period is allowed but it must be public

If most good players give an incorrect answer, evil wins instead.

Evil answers do not count.

Submitting no answer is considered wrong.

Characters like the **Heretic** and **Politician** flip win conditions or alignments after **Grave's** ability acts.

How To Run

When the **Grave** asks their question, you may deny or accept it. If you accept it, make a note of it and mark **Grave** with the **Asked** token. They may, with your permission, change it at any time.

If the game ends and good wins, announce so but reveal **Grave's** question (if any) before the **Grimoire**. Give all players sufficient time to discuss before they answer. If most good players do not answer correctly, declare that evil has won. Otherwise continue with the game end as normal.

Examples

The **Grave** asks a question. It is accepted and when the **Demon** dies, most good players fail to answer it correctly. Evil wins.

The **Grave** asks a question and later dies. No question is asked or answered when good wins.

The **Grave** asks a question. Later, evil wins and nothing else happens.

"LISTEN TO ME,
WATCH ME, LOVE ME!"

False Idol

Ability: After day 6, evil wins. Until just you, the Demon & another player live, good can't win by killing the Demon.

False Idol takes the stage.

After day 6, evil wins.

While the **False Idol** lives, good cannot win through their main condition of killing the **Demon** unless just 3 players live, specifically the **Demon**, **False Idol** and another player.

Remember to announce the day number, even if the **False Idol** is not in-play.

How To Run

When preparing the 1st night, place the **Stage** token 6 steps anti-clockwise to the **False Idol**.

At the start of every day, move the **Stage** token 1 step clockwise. If it reaches the **False Idol**, do not move it any more.

Every dusk, if the **False Idol** is marked **Stage**, announce that the game is over and that evil has won.

If no **Demons** live, good does not win until the final 3 living players were the **Demon**, **False Idol** and 1 other player.

If **False Idol's** character moves, move the **Stage** token accordingly so this setup does not break.

Examples

The **Demon** is executed, the game continues. When the **False Idol** is executed, good wins.

It is the 7th night, evil wins.

The final 3 consists of the **Demon**, **False Idol** and 1 good player. The good player nominates and executes the **Demon**. Good wins.

Jinxes

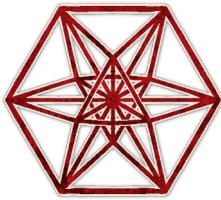

Estelle: A dead **False Idol** cannot stop good from winning through killing the **Demon**.

Vigormortis: A dead **False Idol** cannot stop good from winning through killing the **Demon**.

Zhabazhbu: A dead **False Idol** cannot stop good from winning through killing the **Demon**.

*"I am the box and He is the key.
Unshuffle and the truth you too shall
see."*

Afonoplexia

Ability: On the final day, good only wins if a Minion is executed. If you die, keep this ability.

The Afonoplexia reverses the goal.

On the final day, in order for good to win, a **Minion** must be executed. If the **Demon** is, evil wins.

The **Afonoplexia** keeps this ability if they die.

If the player is already dead when they get the **Afonoplexia** ability, they do not have it.

Any **Minion** can be executed to make good win, even dead ones.

How To Run

On the final day, if a **Minion** is executed, declare that good wins. If the **Demon** is, evil does.

Examples

It is day 5 of an **Infernoplex** game. The **Afonoplexia** is executed, good wins.

It is the final day and the **Afonoplexia** and another Minion live. The other **Minion** is executed, good wins.

The **Afonoplexia** is killed by the **Sterenae**. When the **Sterenae** is executed, evil wins.

Json

```

  "flavor": "I am the box and He is the key. Unshuffle and the truth you too shall see."
}
```

"... And it shall be our duty to slay the children of the wretched witch as our only way to reply to her sins"

Enra

Ability: On the final day, before nominations & even if you die, the Demon may publicly choose a player: they are "the Demon" instead.

The Enra confuses the good team.

On the final day, the **Demon** may publicly choose any player before nominations begin. That player is now "**the Demon**" instead of the real **Demon**.

The original **Demon** and the new "**Demon**" keep their characters and character type but the chosen player registers as the **Demon** instead and is required to die for good to win.

The original **Demon** is no longer required to die for good to win.

The **Enra** keeps this ability even if they die. They do not if they started dead

Only the **Demon** may choose and it must be publicly

While the chosen player can technically choose with **Enra's** ability, do not let them change the **Demon**. Still, like all public actions, treat it as real as possible without making any mechanical impact.

How To Run

On the final day, ensure there is ample discussion time for the **Demon** to choose. If the **Demon** publicly chose a player before nominations began, mark them with the **The Demon** token. They are now "**The Demon**" and register as such to everything, including the good team's win condition.

Examples

The **Enra** dies. On the final day, the **Demon** chooses the good **Psychic**. When the **Demon** is executed, evil wins. If the **Psychic** was executed, good would have won.

Demons

Pages 46–62

""You must play with at least 1 friend."

Requirements:

- A room with an open roof
- An alive (optional), human (recommended) sacrifice
- Surgical equipment
- An item representing the horror you wish to unleash
- A new moon

Preparations:

*The rest of the letter is missing**

Invitation Letter

Ability: Each night, Minions choose who holds the Invitation Letter. On night 3, the Invitee chooses a Demon to become. **[+1 Minion]**

Only a few receive a Golden Letter.

There is no player with the **Invitation Letter** character. It is instead a token held by a player called the **Invitee**.

Each night, **Minions** choose who is this **Invitee** and on night 3, the **Invitee** chooses a **Demon** to become. This does not change their alignment.

The **Invitation Letter** cannot be **drunk** or **poisoned** as it is not a player.

The **Invitee** is not "**The Demon**" but if they die, the **Invitation Letter** does too, winning the game for the good team. This only persists until after night 3, where the **Invitation Letter's** survival means nothing for either team.

A **Minion** replaces the missing **Demon**.

How To Run

When setting up the game, remove the **Demon** token and replace it with 1 **Minion** token.

When preparing the 1st night, place the **Night 1** token in the center of the **Grimoire**. When preparing the 2nd night, place the **Night 2** token in the center of the **Grimoire**. When preparing the 3rd night, place the **Night 3** token in the center of the **Grimoire**.

Every night, wake all **Minions**. The majority will point to a player. If they can't decide, choose a player. Put all **Minions** to sleep. Wake that player. Give them the **Invitation Letter's** token and mark them with the **Invitee** token. Put them to sleep. If the **Night 3** token is in the center of the **Grimoire**, wake the **Invitee**, they point to a **Demon** icon on the character sheet. Show them the "**You are**" info token then the **Demon** they chose, then put them to sleep. Replace their old character token with the new **Demon** token. You may need to rotate it upside-down if they are good. Remove all the **Night** tokens from the **Grimoire**.

If the **Invitee** dies before a **Demon** is ever invited, declare that the game is over and good has won.

Examples

It is 9 players. There are 2 **Minions** and no **Demon**. Both **Minions** wake together and eventually point to 1. That **Minion** is given the **Invitation Letter's** token. They die tomorrow and good wins.

The good **Invitee** invites **Lleech** and becomes a good **Lleech**.

Jinxes

Clockmaker: If the **Invitation Letter** is in-play, the **Clockmaker** does not receive their info until a **Demon** is invited.

Engineer: If the **Engineer** removes the **Invitation Letter** from play, the **Invitee** becomes the chosen **Demon**. If the **Engineer** creates the **Invitation Letter** before night 4, the **Demon** becomes a not-in-play **Minion Invitee**. Otherwise nothing happens.

Hatter: If the **Hatter** dies, the **Invitee** can choose a **Demon** to become. If the **Demon** chooses **Invitation Letter**, they also choose a **Minion** to become and are the **Invitee**.

Legion: If **Legion** is invited, most players (including all evil players) become evil **Legion**.

Lord of Typhon: If a Minion invites **Lord of Typhon**, they choose 1 of their neighbors to become an evil **Lord of Typhon** instead.

Marusok: **Marusok** can be invited alongside a **Demon**. If it is, all **Minions** become **Marusok** except the **Invitee**, who becomes the invited **Demon**.

Magician: Each night, the **Magician** chooses a **Minion**: if that **Minion** & the **Invitation Letter** are alive, that **Minion** is the **Invitee**.

Marionette: The **Marionette** neighbors a **Minion**, not the **Demon**. The **Marionette** is not woken to choose who takes the **Invitation Letter**'s token. The other **Minions** know the **Marionette**.

Poppy Grower: If the **Poppy Grower** is in-play, **Minions** don't wake together. They are woken one by one, until one of them chooses to be the **Invitee**.

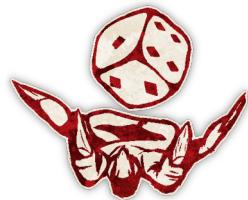

Pukka: The **Invitee** may choose to invite **Pukka** on night 2.

Vizier: The **Vizier** can die by execution if they are the **Invitee**.

Zombuul: On night 3, if a dead player becomes the **Invitee**, they may choose to invite **Zombuul**. If they do, they become a **Zombuul** that has died once.

"the time has come for you to return
where you belong"

Hand of Fate

Ability: Each night, choose a number: gain that ability. Each night*, choose a player: they die. All players start knowing your abilities.

The Hand of Fate rolls dice.

Each night, the **Hand of Fate** signals a number and gains an ability corresponding to that number.

The **Storyteller** decides the range of numbers and what abilities correspond to what number at the start of the game.

All players start knowing these abilities but not what number they correspond to.

How To Run

When setting up the game, make a list of abilities with corresponding numbers on multiple cards or pieces of paper.

When preparing the 1st night, announce to everyone "The **Hand of Fate** is in-play. Here are its abilities" and list its abilities down on any noticeboard or whiteboard that is prominent in the room.

Every night, wake the **Hand of Fate**. They signal a number, show them the card with their corresponding ability. They have that ability. Use the ? Tokens as needed. Every night but the 1st, after using their abilities, the **Hand of Fate** shakes their head "no" and points at any player. That player dies, mark that player with the **Dead** token. Put the **Hand of Fate** to sleep.

Examples

The **Hand of Fate** chooses 2 and gains the ability "Once per game, at night, choose 2 players to swap characters.". They do not swap tonight. The next night, they choose themselves and a **Minion** to swap characters.

The **Hand of Fate** is in-play. On the 1st night, all players including them learn the abilities it can have.

"No... Please stop. I don't want to hurt you"

Estelle

Ability: Each night*, choose a player: they die. Minions you kill keep their ability and choose a player: they die.

Estelle sacrifices their Minions.

If **Estelle** kills a **Minion**, they keep their abilities and choose a player: they die.

There's really nothing else to it.

How To Run

Every night but the 1st, wake **Estelle**. They point at any player. That player dies, mark them with a **Dead** token. Put **Estelle** to sleep. If the the dead player was a **Minion**, wake them. Show them the "**This character selected you**" and **Estelle's** token. They point at any player. That player dies, mark them with a **Dead** token. That **Minion** keeps their ability, mark them with a **Has Ability** token.

Examples

Estelle kills the **Assassin**. They also wake to kill a player through **Estelle's** ability then wake to kill another through their own.

Jinxes

False Idol: A dead **False Idol** cannot stop good from winning through killing the **Demon**.

"Traitor Traitor Traitor
Traitor Traitor Traitor
Traitor Traitor Traitor
Traitor Traitor Traitor..."

Corr. Sylphy

Ability: Each night*, choose 1 more player than last night (up to 5): they die. If a Minion died today, choose 1 instead.

Sylphy kills. And kills. And kills. And kills. And kills. And kills. And kills. And. And. And. And.

Corr. Sylphy kills 1 more player than last night.

If a **Minion** died that day, this chain resets.

Due to token limitations, this maxes out at 4

How To Run

When preparing every night, mark **Corr.** **Sylphy** with all the **Kill Chain** tokens already in the **Grimoire**.

Every night but the 1st, wake **Corr.**. **Sylphy**. Signal to them how many players they can kill (denoted by 1 + how many **Kill Chain** tokens they are marked with). They point to that many players. Those players die, mark the 1st with the **Dead** token and the rest with **Kill Chain** tokens. Put **Corr.** **Sylphy** to sleep and mark them with a new **Kill Chain** token unless there are already 4 in the **Grimoire**.

If a **Minion** dies during the day, remove all **Kill Chain** tokens from the **Grimoire**.

Examples

Corr. **Sylphy** kills 1 player. The next night they kill 2. The night after they kill 3. A **Minion** dies the next day and that night they kill 1 player. The next night they are back to 2 and so on.

Jinxes

Marusok: Corr. Sylphy's ability only checks the last night they woke.

"Bathe within the flames, such that they purify thee of thy sin of weakness and frailty. Through atonement for thy mortality thou shalt be embraced by The One Beyond."

Zhobazhbu

Ability: Each night*, choose a player: they die. Minions you kill keep their ability & reverse Townsfolk info. [-1 Outsider]

The Zhobazhbu purges.

If the **Zhobazhbu** kills a **Minion**, they keep their abilities and reverse info yielded **Townsfolk** abilities.

Even if a **Townsfolk** is **drunk** or **poisoned**, the info they receive must match the current notation.

False info becomes true and true info becomes false. If a character learns a mixture of false and true information, such as the **Savant**, they will learn all information of the same parity.

If a character learns subjective info, or info on a scale, they will learn the exact opposite of what they should learn.

If a **Minion** is killed by the **Zhobazhbu** again, the info goes back to normal.

1 less **Outsider** is in-play.

How To Run

While setting up the game, remove 1 **Outsider** token and add 1 **Townsfolk** token.

Every night but the 1st, the **Zhobazhbu** points at any player. That player dies, mark them with the **Dead** token. Put the **Zhobazhbu** to sleep. If they killed a **Minion**, mark them with a **Has Ability** token and place the **Purged** token in the center of the **Grimoire** (or remove it if it is already there). They keep their ability.

While the **Purged** token is placed on the **Grimoire**, you must give reversed info **Townsfolk** ability prompts you to give information.

Examples

The **Zhobazhbu** kills the **Hagumoth**. Tomorrow, the **Artist**, learns the wrong answer to their question and when the **Hagumoth**-chosen player is executed, evil wins.

The **Zhobazhbu** kills the **Sage** the night after killing a **Minion**. The **Sage** learns 2 players, neither are the **Zhobazhbu**.

Jinxes

Banshee: If the **Demon** kills the **Banshee**, players still learn that they have died.

Mystery Attack: The **Mystery Attack** when learning their next ability will always receive true information.

False Idol: A dead **False Idol** cannot stop good from winning through killing the **Demon**.

```

"Attrape des vers, salope."

Sabnock

Ability: Each night*, choose a player: they die. Outsiders you kill poison the closest Townsfolk neighbor to you. [+1 Outsider]

Sabnock is French.

Outsiders killed by the **Sabnock poison** 1 **Townsfolk** neighbor.

The **Poisoned** player must be closer to the **Sabnock** than the other **Townsfolk** neighbor. If both are equal distance away, either can be **Poisoned**.

1 extra **Outsider** is in-play.

How To Run

While setting up the game, remove 1 **Townsfolk** token and add 1 **Outsider** token.

Every night but the 1st, wake the **Sabnock**. They point at any player. That player dies, mark them with the **Dead** token. If they were an **Outsider**, their **Townsfolk** closer to the **Sabnock** is **Poisoned**, mark them with the **Poisoned** token. Put the **Sabnock** to sleep.

Examples

The **Sabnock** kills the **Barber**. The **Savant** and **Mathematician** are **Townsfolk** neighbors to the **Barber**. The **Savant** is closer so is **Poisoned**.

Jinxes

Trauma: **Traumas** created by its own ability do not register as **Outsiders** to the **Sabnock**.

```

"I gave your kind a chance. But it turned out to be a waste of time."

Reverie

Ability: Each night*, choose a player: they die. On your 1st night, choose from a list of events. All players learn your choice.

Reverie brings disaster.

On their 1st night, **Reverie** chooses 1 event from a list predetermined by the **Storyteller**.

All players know this event and when it will happen.

How To Run

When setting up the game, make a list of events with predetermined days for each event.

On the 1st night, wake **Reverie**. Show them the list of events and they point to 1. Save that event on a sticky note or something.

At the start of the 1st day, announce "**Reverie** has chosen" the event they chose "to happen on" what day it will happen. Place the **Final Hour** token that many spaces anti-clockwise to **Reverie** and mark them with as many **New Day** tokens as the **Final Hour** token will reach them prematurely.

At the start of every day, move the **Final Hour** token 1 step clockwise. If it reaches **Reverie**, remove a **New Day** token. If there were none, the event happens.

Every night but the 1st, wake **Reverie**. They point at any player. That player dies, mark them with the **Dead** token. Put **Reverie** to sleep.

Examples

Reverie chooses [PLACEHOLDER] to happen on [PLACEHOLDER_DAY]. All players learn this and on [PLACEHOLDER_DAY], it happens.

Json

```
{

"If only you knew your place!
But it's too late now!"

Madeline

Ability: Each night*, choose a player: they die. Townsfolk equal to the night's number (maximum of 3) clockwise to you are poisoned.

Madeline makes a line of poison.

The closest **Townsfolk** equal to nights passed clockwise to **Madeline** are **poisoned**.

If **Madeline** is brought into play midgame, they immediately retain their progress so keep a note of how many nights have passed.

A limit of 3 **Townsfolk** can be **poisoned** by **Madeline**.

This is a constant check for the closest **Townsfolk** and will immediately make a player **healthy** if they are no longer within range or a **Townsfolk**.

How To Run

When preparing the 1st night, mark the closest **Townsfolk** clockwise to **Madeline** with the **Night 1** token. When preparing the 2nd night, mark the 2nd closest **Townsfolk** clockwise to **Madeline** with the **Night 2** token. When preparing the 3rd night, mark the 3rd closest **Townsfolk** clockwise to **Madeline** with the **Night 3** token.

Every night except the 1st, wake **Madeline**. They point at any player. That player dies, mark them with the **Dead** token. Put **Madeline** to sleep.

Townsfolk marked with **Night 1/2/3** are **poisoned**.

Examples

Madeline has **Townsfolks** A, B, and C clockwise to them in that order. On the first night, A is poisoned first. The next night, B is poisoned and the night after that, C is. Nobody else is poisoned afterwards.

```

"Applaud me! For I am the God of the new world!"

Destiny

Ability: Each night*, choose a player: they die. Once per game, you may make a prediction: if accepted, it will come true at a price.

The Destiny defines the future.

Once per game, the **Destiny** may make a prediction of the game that, if accepted, will happen.

This can happen at any point in the game, via texting, notes, privately meeting, publicly declaring.

The prediction comes with consequences which are to balance the power of this prediction and to signal the good team what has happened in some way.

Depending on the nature of the prediction, it may not work on players "safe" from the **Demon**.

How To Run

When the **Destiny** makes a prediction, either verbally or via text, decide whether to accept it or not. If it is denied, prompt them to try again or tell them they have lost all uses. If it is accepted, signal or telegraph that it is. You may give a clue of any kind to the good players at any point in the game. You may also leave other consequences to ensure fairness such as malfunctions or making the prediction hurt the evil team.

Every night but the 1st, wake the **Destiny**. They point at any player. That player dies, mark them with the **Dead** token. Put the **Destiny** to sleep.

Examples

The **Destiny** predicts they will have more killpower. The **Storyteller** chooses a player to kill alongside the **Destiny**. 1 good player learns "The **Demon** is speeding up". Occasionally, the **Storyteller** kills a **Minion**.

The **Destiny** predicts there will be heresy. The **Storyteller** ain't about that bullshit and defenestrates them.

“Plank of Wood noises”

Plank of Wood

Ability: Each night*, choose a player: they die. Good wins if (& only if) the Storyteller is executed. If you die, keep this ability.

The Plank requires... alternate means to beat.

Good does not win if the **Plank of Wood** dies. Instead, the only way they can win is through the **Storyteller's** execution.

Abilities which causes good to win do not cause them to win.

The **Plank of Wood** keeps their ability while dead.

Evil still wins if just 2 non-**Traveller** players live.

How To Run

Every night but the 1st, wake the **Plank of Wood**. They point at any player. That player dies, mark them with the **Dead** token. Put the **Plank of Wood** to sleep.

If the **Plank of Wood** dies, the game continues as normal and they still wake for their ability.

If a player nominates and executes you while the **Plank of Wood** is in-play, declare that the good team has won.

Examples

The **Destiny** predicts they will have more killpower. The **Storyteller** chooses a player to kill alongside the **Destiny**. 1 good player learns “The **Demon** is speeding up”. Occasionally, the **Storyteller** kills a **Minion**.

The **Destiny** predicts there will be heresy. The **Storyteller** ain't about that bullshit and defenestrates them.

Jinxes

Hatter: The **Plank of Wood** cannot be removed or brought into play by the **Hatter's** ability.

Pit-Hag: The **Plank of Wood** cannot be removed or brought into play by the **Pit-Hag's** ability. If the Pit-Hag creates a **Plank of Wood**, they swap characters with the previous **Plank of Wood**.

Json

```

"You cannot stop time. All you can do is run away from this reality. How far will you run away this time I wonder?"

Time

Ability: On your 1st night, see the Grimoire & choose all players. Each night*, the next alive player chosen dies, even if they could not.

Time ticks away.

Time does not wake to kill. Instead, they decide their kills all on the 1st night by seeing the **Grimoire** then choosing the order in which each player dies.

If the next player on the list is dead, it skips over to the next alive player.

Any form of safety or death protection is ignored by Time.

An external notepad will be needed to note all the order of choices.

How To Run

On the 1st night, wake **Time**. Show them the **Grimoire** for as long as they need. **Time** then points to every player in the **Grimoire** in a particular order. Note down this order on an external notepad. Put them to sleep.

Every night after the 1st, the topmost player on **Time's** list without a shroud dies, mark them with the **Dead** token.

Examples

cant be arsed to think of any. youll figure it out

Jinxes

Damsel: The **Damsel** starts knowing a not-in-play **Outsider** and registers as it to **Time**.

Heretic: The **Heretic** starts knowing a not-in-play **Outsider** and registers as it to **Time**.

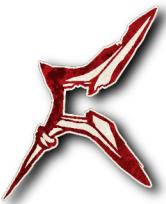

Magician: When **Time** sees the **Grimoire**, the **Minion** and **Magician** tokens are removed.

Poppygrower: geniunely just dont. i dont even have an idea for a jinx

"" "

Fall. Charlotte

Ability: All players start knowing a day. After that day, at dusk, evil wins. Nominations bring it closer by 1 (2 if Demon nominee).

Insert creative description.

All players start knowing a day, after which evil wins. Every nomination brings it closer by 1. If the **Demon** is nominated, the day comes closer by 2.

Evil winning happens every dusk after the day comes to pass.

It is recommended to keep track of the updated number and announce it every day (but ensure to pretend that the **Demon** was treated like a normal nomination.)

Fall. Charlotte does not kill.

How To Run

When preparing the 1st night, decide how many days evil will win in. Place the **Break Point** token that many spaces anti-clockwise to **Fall. Charlotte** and mark them with as many **New Cycle** tokens as the **Break Point** token will reach them prematurely.

Immediately after dawn on the 1st day, declare the day before evil wins.

At the start of every day and when a player is nominated, move the **Break Point** token 1 step clockwise. If it reaches **Fall. Charlotte**, remove a **New Cycle** token but if there were none, do not move the **Break Point** token any more. If the **Demon** was nominated, move the **Break Point** token 1 extra space and repeat the previous steps.

Every dusk, if the **Fall. Charlotte** is marked **Break Point**, declare that the game is over and that evil has won.

Examples

After day 10, evil wins. 3 nominations happen on the 1st day, 2 on the second including the **Demon**. Tomorrow, after 2 nominations, the **Demon** is not executed so evil wins.

Repeat previous example but **Demon** dies. Good wins.

Jinxes

Banshee: Each night*, **Fall. Charlotte** chooses an alive good player (different to previous nights): a chosen **Banshee** dies & gains their ability.

Exorcist: If the **Exorcist** chooses **Fall. Charlotte**, tomorrow, nominations do not bring the final day closer.

Farmer: Each night*, **Fall. Charlotte** chooses an alive good player (different to previous nights): a chosen **Farmer** uses their ability but does not die.

Fortify: If **Fall. Charlotte** is in-play, the **Fortify**-protected player is safe from all evil abilities.

Grandmother: If **Fall. Charlotte** is in-play and the **Grandchild** was nominated, the final day comes closer by 2 instead of 1.

Innkeeper: If **Fall. Charlotte** is in-play, the **Innkeeper**-protected players are safe from all evil abilities.

King: If **Fall. Charlotte** is in-play, and at least 1 player is dead, the **King** learns an alive character each night.

Mayor: If **Fall. Charlotte** and **Mayor** are both in-play and no execution occurs on the final day, good wins instead.

Monk: If **Fall. Charlotte** is in-play, the **Monk**-protected player is safe from all evil abilities.

Ravenkeeper: Each night*, **Fall. Charlotte** chooses an alive good player (different to previous nights): a chosen **Ravenkeeper** uses their ability but does not die.

Sage: Each night*, **Fall. Charlotte** chooses an alive good player (different to previous nights): a chosen **Sage** uses their ability but does not die.

Soldier: If **Fall. Charlotte** is in-play, the **Soldier** is safe from all evil abilities.

Spirit: Each night*, **Fall. Charlotte** chooses an alive good player (different to previous nights): a chosen **Spirit** uses their ability but does not die.

Templar: If **Fall. Charlotte** is in-play, the **Templar**-protected player is safe from all evil abilities.
